

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning at page 4, line 18, with the following rewritten paragraph:

-- In Figures 1 to 3, a pump 1 comprises an electric motor 2 having a shaft, ~~each~~ one end of which forms a shaft output 3 which is intended to drive a pump impeller. At ~~[[a]]~~ this first end, a first impeller 4 provides low-pressure pumping at a high flow rate for the filtration circuit of the swimming pool whilst, at the other opposite end of the motor, the other shaft output 5 drives a second impeller 6 for pumping at medium or high pressure at a low flow rate which is intended for controlling a cleaning device for swimming pools. The water of the swimming pool enters via an axial aperture 11 and leaves the low-pressure pump 4 via an outlet 12, towards the pool of the swimming pool. --
